

Amendments to the Abstract

Please amend the abstract as follows:

The machine comprises at least a first sheet inspection unit with an inspection cylinder [[(4)]] for transporting a printed sheet during inspection, an illumination means [[(5)]] and a camera [[(6)]] connected to an analysing device, an input transfer cylinder [[(3)]] to bring the printed sheet to the at least one inspection unit and an output transfer cylinder [[(17)]] to take away the printed sheet from the at least one inspection unit. The inspection unit and the transfer cylinders are arranged in such a manner that the output transfer cylinder [[(17)]] takes away the inspected printed sheet only once the inspection is completed.
